Psychological Abstracts (PA) journal (ISSN 0033-2887). The comprehensive monthly compilation of nonevaluative summaries of the serial and book literature in psychology and related disciplines.

Issue. The monthly **PA** issues contain entries listed under 22 major classification categories, with some categories having subsections, as shown in the Table of Contents. Under each classification heading, the records are arranged alphabetically by first author, and are numbered consecutively each year.

Indexes. An author, brief subject, and book title index appear in each monthly issue. An expanded and integrated annual index is published at the end of each volume.

PsycSCAN®: Clinical Psychology. A quarterly print publication and electronic subset of the PsycINFO database containing abstracts from subscriber-selected journals in clinical psychology.

PsycSCAN: Psychopharmacology®. An electronic-only subset of the PsycINFO database with targeted information about clinical and experimental psychopharmacology.

PsycINFO® Database. An electronic bibliographic database for professionals in behavioral sciences and mental health. It includes abstracts and citations (not full text) for journals, books, book chapters, and dissertations. Coverage extends from 1842 to present. The database includes material relevant to psychologists and professionals in related fields such as psychiatry, management, business, education, social science, neuroscience, law, medicine, and social work.

PsycEXTRA, a companion database to the scholarly PsycINFO, links clinicians, librarians, consumers, policy-makers, and researchers to a variety of credible information sources covering psychology, behavioral science, and health. This Annual Subject Index, published in three volumes, consolidates references to abstract records published in 12 monthly issues of *Psychological Abstracts* from January 2004 through December 2004. A companion work, the Annual Author Index, references these records by author and abstract number.

Index terms, selected from the *Thesaurus of Psychological Index Terms,* represent the literature covered for the periods indicated. Only terms assigned as major terms, reflecting the main focus of the article, appear in the printed subject index. (Terms assigned as minor do not appear in print but are available for online searching.) Subject matter content determines the specific terms used and, thus, not every thesaurus term will appear in every index. "See" and "See Also" references are present to direct the user to the preferred terminology or related areas of interest. Index phrases are alphabetically arranged under the appropriate index terms and represent a concise statement of the article's content or, when appropriate, identify the independent and dependent variables described in the material as well as the subject population. Style changes such as the increased use of abbreviations or the elimination of some hyphens may result in some inconsistencies and may affect the alphabetical order of phrases.
